

Safeguard your business. Stop bots. Easily, immediately, permanently.

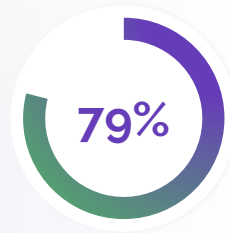

Traditional solutions have proven ineffective against intelligent bots used by fraudsters to attack company websites, applications, and especially consumers' accounts during sign-in and sign-up.

Of businesses have witnessed customer churn due to bot attacks.¹

Of businesses have suffered revenue loss due to bot attacks.¹

Of businesses can't distinguish between good and bad bots.²

It's essential to protect your website and apps from these automated volumetric attacks, something that a bot management software is designed to address.

Why Arkose Bot Manager?

Arkose Bot Manager from Arkose Labs is a low-code platform that offers predictive detection and adaptive technology, boasting remarkable efficacy in stopping bad bots.

Our low-code security platform, powered by AI, integrates defense-in-depth detection with dynamic attack response to navigate unclear trust signals without disrupting the good user experience.

Fraud and security teams can benefit from our advanced detection capabilities, risk insights, and user-friendly enforcement options to progress from bot management to bot mitigation.

We were looking to prove value in the detection of critical risk while also reducing the number of fake accounts on our platform. With Arkose Labs, we were actually able to achieve both of those goals.

– Nick Reva, Security Engineering Leadership, Snap Inc.

Arkose Labs, powered by machine learning and built exclusively on Amazon Web Services (AWS), is a leading platform that combats bot and fraudster attacks by revealing signs of financially motivated behavior.
