

Benefits to integrating and managing your distributed data

As data drives more decisions, accessing timely information from reliable sources has become vital to business success. However, the distributed nature of data has made it increasingly more complex to integrate and manage.

367

The average large organization pulls data from 367 software apps and systems¹

Data virtualization presents users with a logical, business-friendly view of distributed data as if it were in a single, integrated data source.

62%

62% of organizations report more than half of their data is inaccessible²

Simplify data management and enable timely decision-making with a self-service platform for all business users.

70%

70% of employees have access to data outside their security clearance³

Establishing a centralized data access layer provides security teams with a single point of control, so users only receive access to the data they're cleared for.

Logically integrate, manage, and deliver distributed data regardless of where it may live with the Denodo Platform on the Amazon Web Services (AWS) Cloud.

83%

Make quicker decisions with real-time data

With Denodo's data virtualization, businesses experience 83% reduction in time to revenue⁴
